RG104 E-1 Box 135 Aug-Sep 1885

Mint of the United States at Philadelphia,

MELTING AND REFINING DEPARTMENT,

Philadelphia, 3rd August, 1885.

Sir

I have tested the two kinds of coal for melting purposes, viz. that furnished by G. B. Newton & Co, and that by Wm H. C. Cook, and I find a very marked difference in their qualities. The former was clean, did not spall, and made an intensely hot fire, without choking, or without special cleaning. That of H. C. Cook is too soft, burns away without producing sufficient heat, and is liable to form melted clinkers that choke and deaden the fire. The former is far superior in every respect to the latter and is much more efficient and economical.

Hon. D. M. Fox
Superintendent

Respectfully yours
J. C. Booth
M & R
